Level Up: Implement a New Technology

Note: This is hypothetical. Don't implement a new technology without speaking to your site supervisor or library director.

Discuss three technologies or products a library could implement to improve the ability of staff and/or patrons.

What should determine the decision whether or not to offer these specific technologies?

How would a library prepare their patrons for this change? How deeply would the patrons be impacted?

What problems will library staff have to solve before and after implementation?

How would you determine if the implementation was successful?
