

Customer Focused Library Research Methods Toolkit

Elizabeth Shobert, EnviroSell

Gretel Stock-Kupperman, Metropolitan Library System

Don't try to change people's behavior: identify and design for it.

-Ann Marie Luthro, VP Marketing, EnviroSell

One of the key lessons learned by the libraries participating in the Customer Focused Library project was that we need to change how we track and observe patron behavior. Circulation statistics, website hits, reference transactions, and other traditionally gathered library statistics are good, but do not focus on how people are using the library space itself. Other data needs to be collected and considered in order to analyze what changes are needed.

Set Yourself Up for Success

In order to effectively gather information about the use of your library:

- Dedicate staff time to the effort – make sure that data-gathering tasks are part of people's jobs.
- Study all times of day, days of week – usage differs at different points in the day. Make sure you aren't getting skewed data because of a lack of study on weekends or in the evening.
- Train staff to gather without judgment – If you collect data, make sure staff knows to be objective and track everything they see within the study parameters. Make sure they understand their role as an objective observer.
- Train, try, assess, retool – Your first efforts may not be as successful, based on a number of factors. Make sure you are regularly compiling data in the early stages to find errors in the collection method or with collectors.
- Consider bringing in outside opinions – Interns, volunteers, and other non-library staff may have a different perspective on what you're studying, and can lend an important point of view.
- Train all staff to observe and report – If you build a culture of observation and discussion, your research findings won't be a surprise, and extensive research may not be as necessary.

Tools to Use

The following pages have tools that you can use to study your library, based on EnviroSell's model of observing patrons, taking exit surveys, and using video footage. You can incorporate any of these three methods, and the tools are a way for you to start.

Density Maps – This tool is a way to track where patrons are by age and gender in your library at specific periods of time. This sheet can be used at regular intervals (half hour,

hourly) to track usage of the library space over time. This tool will show trends of what kinds of patrons are using what spaces, and what space is unutilized or underutilized.

Activity Map – This tool tracks patrons by age, gender, ethnicity and behavior. Each of the behaviors can be customized based on your library interests. It is a similar tool to the Density Map, but is further broken down by patron behavior.

Patrons Who Visit Each Section First – This tool is used by EnviroSell staff to note where patrons first go for help in the library. This could be used periodically through the year to track where people are seeking and finding help.

Patrons Who Request Each Assistance Type – Unlike the other tools, this could be implemented at service desks across the library. People who receive questions on the floor could count statistics as well to get a robust idea of what kinds of assistance is needed for patrons.

Computer Use Chart and *Computer Length of Use Chart* – These are other observation tools to see if there are patterns in usage of your computers, and to assess if more workstations are needed. You could add in patron ages or gender to break down needs further.

Time of day: _____ Date: _____ Site: _____ ID: _____

Mark the number on the map and write in the age and gender (X=male, O=female) for each library patron. If the patrons are in a group, circle the numbers that represent that group. The first person you plot will be number 1, the second is 2. If the 3rd, 4th and 5th people are a mother and her two children, circle them to indicate they are together. This goes for friends and couples too.

	AGE	GENDER		AGE	GENDER
1	21	X O	38		X O
2	34	X O	39		X O
3	13	X O	40		X O
4	13	X O	41		X O

Throughout the day, keep track of the different types of questions that patrons ask. They can range from the most basic directional to more involved research-type questions. If you encounter questions that don't easily fall into one of the above categories, place them in "other." Keep track of those "other" topics so that new types of assistance can be created as needed.

At the beginning of each hour, mark which computers are being used.
